Squarell's contribution to People, Planet and Prosperity

Squarell is dedicated to reduce environmental and financial impact and thereby contribute to a healthier environment and a more successful business. We believe the key to sustainability is in the balance between People, Planet and Prosperity.

People

By alerting drivers of hazardous road conditions, infrastructure conditions and stressful behaviour our products improve the safety of our customers every day.

For instance with the Driver Awareness Panel (DAP) we help to improve driving behaviour. With solutions like the Event Data Recorder and Advanced Tell-tales we can deliver the data that can give insight in dangerous situations or malfunctioning systems.

Planet

Squarell products reduce the fuel consumption of the vehicles in your fleet, monitor harmful emissions and reduce wear and tear on your vehicles. Hence we contribute with our data and solutions to a healthier and more sustainable ecosystem.

Our data can be used to predict, compare, warn, repair, reduce and advise on multiple levels, all helping to reduce the demand on natural resources.

Prosperity

With our products you can realise cost reduction which increases return of investment at company level. Thereby creating opportunities for more employment, investments and sponsoring.

Squarell's vehicle data can be monitored to improve service call schedules, reduce maintenance costs and can help you realise fuel savings of between 6-16%.

Unique Squarell products that contribute to a cleaner environment

The products we deliver contribute to the environment in a positive way by empowering people and organisations to understand their energy usage with great accuracy, be it petrol, electricity or any other source of energy - and through this help them work more efficiently and reduce their impact on the environment.
